Renewable Energy

Want to save on fuel bills and lower your carbon admissions...

Renewable energy as a sector was once viewed as an alternative source of energy, but is now being actively chosen as providing a sustainable solution to satisfying our fuel needs. There are many renewable energy technologies in use around our region which are used in varying amounts and in a wide range of different places.

John Taylor from Suffolk Climate Change Partnership will be talking about the different types of Renewable Technologies, the payback times and Feed-in Tariffs. He will also let you know how your business can benefit from these technologies without any capital outlay?!

How can your company benefit?

John Norton from the White Horse Inn will speak about the ongoing project at the White Horse Inn and the benefits of investing in your business infrastructure.
